EXPERIENCE

Web Developer & Designer, VictLan

Feb 2026 – Jun 2026

Independent Software Development & Client Projects

- Designed and developed a responsive client website end-to-end, translating stakeholder requirements and an original Figma visual system into reusable Next.js components.
- Built dynamic pages and API routes to organize and serve building information stored in Firestore, including floor, room, amenity, history, and firm data.
- Integrated Firebase Storage and deployed the application through Vercel, including custom domain and DNS configuration.
- Implemented semantic HTML, descriptive image text, form labels, focus states, and contrast-conscious UI patterns, validating responsive behavior across desktop and mobile layouts.

PROJECTS

CISP — Clinic Intake & Scheduling Portal github.com/xClaudiaArias/intake

React, Node.js, Express.js, PostgreSQL, Prisma, JWT, Docker

- Designed and built a full-stack clinic portal supporting patient registration, multi-section intake forms, appointment scheduling, symptom notes, and staff scheduling workflows using React and an Express REST API.
- Modeled relational patient, intake, appointment, slot, and audit data with PostgreSQL and Prisma; implemented JWT authentication and role-based access control for patient and staff workflows.
- Implemented backend validation for intake submission requirements and concurrency-safe appointment booking to prevent double-booking under competing requests.
- Built an append-only audit log for tracking application activity and structured the backend with separate routes, controllers, middleware, and data-access utilities.
- Containerized PostgreSQL development with Docker and provided seeded synthetic data and demo accounts for reproducible local setup.

VITA — ATS Resume Builder github.com/xClaudiaArias/vita

React, Node.js, PostgreSQL, Claude API

- Built a full-stack application for creating, editing, and managing structured resumes through a React interface and Node.js backend.
- Integrated the Claude API to support AI-assisted resume workflows while persisting structured resume data in PostgreSQL.
- Implemented modular application architecture separating frontend, backend/business logic, and database concerns.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frontend: React, Next.js, React Router

Backend: Node.js, Express.js, REST APIs

Databases: PostgreSQL, Prisma, Firebase, MongoDB, SQLite

Tools: Git, GitHub, Docker, Postman, Figma, Vercel

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Authentication & Authorization, Responsive Design, Accessibility, Relational Data Modeling

EDUCATION

Mercy University

New York, NY

Master of Science in Computer Science. Graduated with Distinction. GPA: 3.97.

Per Scholas + General Assembly

New York, NY

Software Engineering Immersive. 6+ month full-stack software engineering program with Agile team collaboration.
